

SAHIB NANDA

Bengaluru, India · sabbykabby12@gmail.com · 9953062283

[linkedin.com/in/sahib-nanda](https://www.linkedin.com/in/sahib-nanda) · github.com/thesahibnanda-max · leetcode.com/u/imsahibnanda · codeforces.com/profile/shisukenohara · sahib-nanda-portfolio.vercel.app

SKILLS

Languages: Go, Java, TypeScript, JavaScript, Rust, Python, C, C++

Frameworks & Testing: NestJS, Spring Boot, Micronaut, Flask, Django, Gin, React, JUnit 5, Testcontainers, Playwright

Distributed Systems & Streaming: Kafka, RabbitMQ, Apache Flink, gRPC, Protocol Buffers, Avro, WebSocket, MCP, Event-Driven Architecture, System Design, Data Structures & Algorithms

Cloud Platforms: AWS, GCP, Microsoft Azure

Databases, Storage & Search: PostgreSQL, MySQL, MongoDB, SQLite, Cassandra, ClickHouse, Aerospike, Redis, Valkey, AWS DynamoDB, Elasticsearch, OpenSearch

Infrastructure & Tooling: Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, Linux, AWS ECS, AWS EC2, AWS SQS, Azure VMs, Cadence, Temporal, AWS Step Functions, Prometheus, Grafana, Jaeger, OpenTelemetry

AI-Assisted Engineering: Claude Code, OpenAI Codex, Gemini CLI, Cline, RooCode

EXPERIENCE

CheQ - Software Development Engineer · Bengaluru, India

Sep 2026 - Present

- Engineered a vendor-independent central event platform ingesting ~2K events per second with a 99.99% SLA, built as event-driven NestJS/TypeScript services on RabbitMQ and GCP, backed by MySQL and MongoDB.
- Built configurable event transformation and enrichment pipelines, decoupling producers from downstream analytics and engagement vendors.
- Designed an end-to-end event audit trail so every event is tracked from ingestion to delivery and none is lost.

CRED · Bengaluru, India

Sep 2024 - Jun 2026

Software Development Engineer (Jun 2025 - Jun 2026) · SDE Intern (Sep 2024 - May 2025)

- Engineered a high-throughput search service in Go, migrating inter-service communication from JSON to Protocol Buffers; reduced payload size and lowered AWS load balancer bandwidth costs by an estimated 28%.
- Architected resilient fulfillment workflows for CRED's BBPS platform, increasing instant payment success rate from 95% to 99% through retry orchestration and fault-tolerant, multi-attempt recovery pipelines.
- Eliminated double-fulfillment in payment processing, reducing the incident rate from ~5% to 0% of total payments, by designing idempotent fulfillment mechanisms across distributed transaction flows.
- Delivered a MySQL-backed queue orchestration system handling 200-400 jobs/sec at peak load for asynchronous payment execution, and contributed to BBPS AutoPay infrastructure, reducing payment delinquency below 5%.

Koders - Backend Developer Intern · Dehradun, India

Jun 2023 - Sep 2023

- Developed backend services using Java (Micronaut) and Flask with secure JWT-based authentication; integrated Hasura GraphQL with batched query resolution to cut redundant round-trips and API response overhead.

PROJECTS

Relay - Multi-Agent Collaboration for AI Coding CLIs - Go, MCP, PTY/ConPTY, WebSocket, SQLite, PostgreSQL

2026

relay-sahib-nanda.vercel.app

- Built a single static Go binary that lets AI coding agents in separate terminals (Claude Code, Codex, Copilot CLI, Antigravity CLI) work as one team, wrapping each tool in a PTY/ConPTY and exposing MCP tools for agent-to-agent messaging.
- Tracked each agent's busy/idle/dialog state from its transcripts, logs and SQLite database to deliver messages only at safe moments; added cross-machine sessions via a Go WebSocket server, with zero-footprint config restore verified by CI on Linux, macOS and Windows.

Distributed Bus Booking Platform - Go, Kafka, PostgreSQL, Redis, Elasticsearch

2025

github.com/thesahibnanda-max/redBus

- Architected an event-driven platform with 17 Go microservices, saga orchestration, transactional outbox, and Redis-backed distributed seat locking to prevent overselling; built idempotent Kafka workflows and a full observability stack (Prometheus/Grafana/Loki/Jaeger).

Helios - Distributed Real-Time Streaming & Analytics Platform - Kafka, Flink, Cassandra, ClickHouse, gRPC

2025

github.com/thesahibnanda-max/helios

- Designed a distributed event-streaming and analytics platform with high-throughput, low-latency ingestion for fraud detection and anomaly analysis, with JWT auth, Redis idempotency and OpenTelemetry observability.

Django Instagram Clone - Python, Django, DRF, JWT

github.com/thesahibnanda-max/djangoInstagramClone

- Built a full-stack Django 5 / DRF application with Simple JWT authentication, a social graph, and htmx-powered direct messaging; configured production deployment via Unicorn/WhiteNoise.

fastclient - High-Performance HTTP Client Library for Go

2025

github.com/thesahibnanda-max/fastclient

- Developed an allocation-optimized HTTP client on top of fasthttp with retries, idempotency and timeout composition, achieving ~1.6x lower latency and ~3x fewer allocations than net/http.

EDUCATION

University of Petroleum and Energy Studies - B.Tech., Computer Science (AI & ML) · Dehradun, India

May 2025

CGPA: 8.92/10 · Candidate Master, Codeforces (top ~4% globally rated) · Active competitive programmer on LeetCode
